3. Introduction

This document serves as technical guide to allow 3rd parties to access Experian Bureau Watchlist Screening Service API by means of REST Service passed through a secure HTTPS tunnel.

The aim of this document is to define the REST services that will be required to exchanging data to and from Experian.

Note that this is not a free service and all transactions must be considered billable. To activate the service please contact Experian Integration for more information.

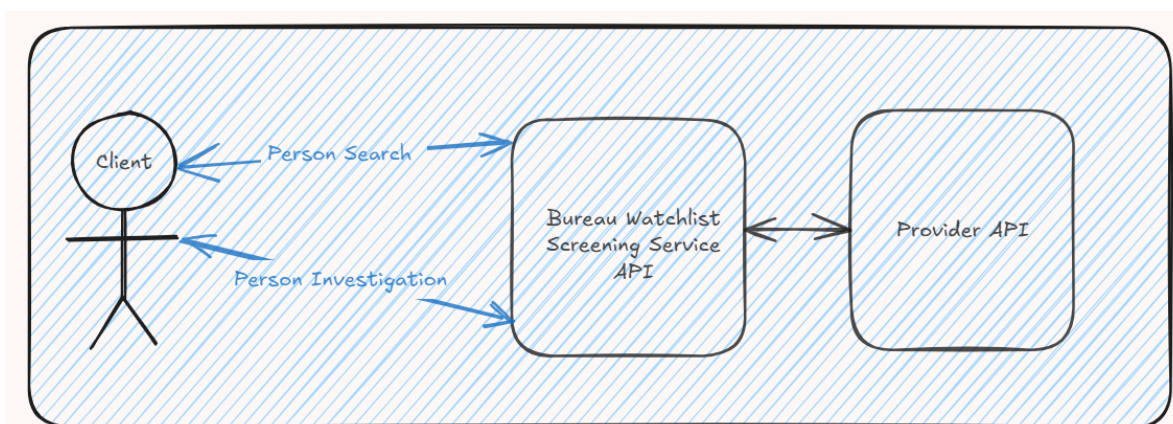

What is the Bureau Watchlist Screening Service:

It is a **process used to identify and verify individuals or companies who have any affiliation to any of the Watchlist categories including any negative media data**. These individuals or companies are often in positions of power or influence within a government or political party, and they may be more susceptible to corruption or money laundering.

This service assessment **evaluates whether an individual or company holds a politically exposed position or is closely associated with**. It determines the person or companies potential risk for involvement in activities like corruption, money laundering, or other financial crimes.

The service allows a variety of checks (Combined or single selection):

- Watchlist screening with various categories
- PEPs screening with various categories (**excluding Companies**)
- Negative Media

4. Service Interface

A REST web service interface is provided over a secure https tunnel. This section covers interface methods exposed via the REST service.
